

JOULECONNECT

SOFTWARE FOR JOULEALARM AND JOULETEMP

► **Manage multiple Joule controllers from a single application** ◀

JouleConnect is software that allows you to view all your JouleTemp and JouleAlarm controllers in a single, integrated software environment which you can easily tailor to your requirements.

The main panel shows the layout of your site and data is updated automatically from the Joule controllers. Click an icon and you switch to the browser window for the selected control.

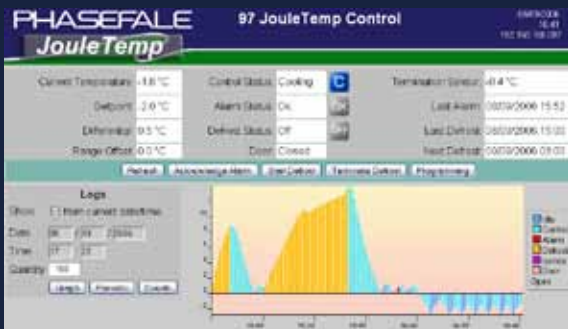

On the main page you can set up links to a full range of detailed information from each controller – live readings, status as icons or text and settings.

Simple, clear and easy to use! JouleConnect installs quickly on your Windows 7, XP or Vista PC. It requires an activation code to access multiple controls but the free version will monitor a single control.

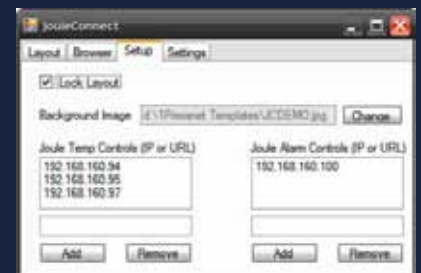

JouleConnect features:

- Windows 7, XP, Vista compatible
- Customisable layout image – simple JPG
- Low-cost – free for a single controller
- Monitor a few or many JouleControls
- Include as much or as little detail as you want on main screen
- Simple set-up, easily customised
- Free download from our website

Click on the status icon to display further information about the controller.

The customisable layout screen shows your site and live readings of selected controllers. The tab above switches to other windows, such as the set-up screen right, where you add the IP addresses of your controllers.
