Pressnet – software for Presscon Refrigeration and Air-conditioning Systems

Pressnet Software allows you to access and control Phasefale's Presscon refrigeration and air conditioning control system. From Pressnet you are able to view and change the current system status, check previous events and trends. User friendly, Pressnet software works exactly the same onsite or remotely with a range of connection options including internet, direct PC connection or dial up access over phone lines.

Pressnet has been designed to show problems by exception – so all staff can easily be trained to spot problems and react accordingly. But dig deeper and technical users can analyze problems using the powerful diagnostic tools included.

Pressnet software is also available in a "Lite" version*, where a dedicated onsite PC is not required, for a lower installed cost. Both versions are intelligent enough to automatically configure themselves to Presscon, so can be used straight away without complicated installation or configuration. If required, a customized site layout screen is simply setup.

So for easy, total control of your refrigeration or AC plant, whether on site or remotely, Pressnet Software provides a total solution.

Pressnet layout is clean and simple to use

History functions for total recall
- Traceable history log of user access and operations
- Search functions in history logs
- offline programming and saving of controller data

User friendly operation
- Site layout designed for non technical users
- "At a glance" system status for quick recognition of alarm events
- 4 user access levels with unlimited users
- Quickly and easily change setting and status of system
- Automatic configuration to connected Presscon
- Free on-line updates to program via website
- Customize the site layout to suit the specific site requirements.
- Access to unlimited sites from a single screen

Powerful, flexible Graphing
- Graphs include color coded trace to match system status including defrosts, alarm etc.
- View data back to installation date
- Highly detailed graphs with 1 minute resolution & accurate crosshair function
- Composite graphs allow mixing of different parameters (e.g. temperature & pressure)
- Graph export functions to spreadsheet for detailed analysis
- Graphs saved in memory from commissioning date forward

System status is displayed with color coded traces

Composite graphs allow comparison of different parameters

* Pressnet Lite contains most of the features of Pressnet, the main exeptions being memory limitations (8MB) and recording timebase (5 minutes compared to 1 minute)
